Dear Modeler and Hobbyist:

Welcome to HobbyBoss!

We are a new manufacturer specializing in injection molded plastic model kits. We bring a new and unique approach to our tool making and manufacturing of high quality low priced model kits by utilizing new technologies in the design, development, and the manufacturing of our model kits.

We are excited to offer you through our distributors world wide, top quality model kits. The combination of quality and fair prices appealing to a modeler's primary desires is our primary goal!

Many new releases will be coming soon to the market in the future. We are ready to set a new standard in injected molded plastic model kits.

Please check our website for the latest news regarding our products. Please visit www.HobbyBoss.com!

Happy modeling!

1:48

To solve the problem of the fear of inadequacy of armor protection on the already heavily armored KV-1 Model 1941, it was decided to bring the armor protection of the turret up to a thickness to 75mm. Since the capability of producing such a thick armor plate was lacking at the time, so an interim solution was to use bolt on armor, 25 mm of thickness, bolt directly to the outside of the turret and some other parts of the hull. This type was usually referred to as KV-1s Ekhranami.

1:48

Not enough problem in ability in protection in armor that aim at the KV-1 1941 type, design the personnel proceeded a series enhance the work of the armor, turret of the KV-1 improving behind comes to an about 75 mm of thickness. From the KV-1 shown at the bottom of the left hand page there arose this KV-1 with a German 7.5cm L/43 cannon and German commander's cupola. The armor was sprayed with German camouflage paint.

中国ZBD 04步兵战车

The ZBD 04 is the tracked infantry fighting vehicle (IFV) developed for the PLA in the late 1990s. The vehicle features a Russian BMP-3-style turret armed with a 100mm main gun and a coaxial 30mm cannon. The vehicle was designed to provide protected transport for an infantry squad on the battlefield; to provide fire support for dismounted infantry; and to engage enemy tanks and armoured vehicles. The ZBD 04 is currently equipped by the amphibious mechanised divisions in South Military Region. An armoured recovery vehicle (ARV) variant was also developed.

German Land-Wasser-Schlepper II-Prototype

德国LWS-4水陆牵引车-原型

One disadvantage of the URS was the lack of armor, and armor was deemed unnecessary for any amphibious operations. The floating crane was also thought to be too cumbersome and clumsy so a new vehicle was devised. The overall structure of the LVT was kept, but the rear section had the tracked suspension of the new Amphibious Personnel Transporter (APT) mounted superimposed over the new engine compartment. This gave the LVT a low profile and allowed it to take a large portion (between one-third to transport a load or other cargo. Interesting in this design aspect is the stand winch in the middle of the deck and the fold down air intake. The driver sits in the front down and below and just before the air intakes. Thus the PAV would not be as fiery rather than a tractor. However, the program was cancelled in 1942 after the two prototypes were built and tested. A second prototype was never built because the war had ended. After the war, the URS was taken by the British and its build expanded for technical assistance.

中国96A型主战坦克

The ZTZ-96 (sometimes also referred to as Type 89C) is the final development variant of Chinese second generation main battle tank. It has an indigenous smoothbore 125 mm gun. By introducing the autoloader to reduce the crew to three men, more rounds are available for the higher rate of fire. Auxiliary weapons include one 7.62 mm coaxial machine gun, with a fire rate of 250 rounds/min. A 12.7-mm/50-calibre anti-aircraft machine gun is mounted on the command cupola.

The ZTZ-96 has a combat weight of 41 ton. It is powered by a liquid cooled 730 hp diesel engine, and gives the tank a maximum road speed of 57 km/h.

The Type 039 (NATO reporting name: Song class) is the diesel-electric submarine of the PLA Navy (PLAN) and 16 hulls have been delivered to the PLA Navy since 1994. The first-of-class of the Type 039 submarine No.320 was launched 1994 at Wuchang Shipyard, and started sea trials in August 1995. However, the submarine was not fully operational until 1999 due to serious design flaws, including unsatisfactory underwater performance and noise level. After some major redesign work, a modified Type 039G variant (No.321) entered the service in April 2001.
