Dear Modeler and Hobbyist:

Welcome to **HobbyBoss!**

We are a new manufacturer specializing in injection molded plastic model kits. We bring a new and unique approach to our tool making and manufacturing of high quality low priced model kits by utilizing new technologies in the design, development, and the manufacturing of our model kits.

We are excited to offer you through our distributors world wide, top quality model kits. The combination of quality and fair prices appealing to a modeler's primary desires is our primary goal!

Many new releases will be coming soon to the market in the future. We are ready to set a new standard in injected molded plastic model kits.

Please check our website for the latest news regarding our products. Please visit www.HobbyBoss.com !

Happy modeling!

The Lavochkin La-7 was a Soviet fighter aircraft of WW II. It was a development and refinement of the Lavochkin La-5. This plane had a more powerful engine and better armament and incorporated aerodynamic improvements. The ASh-82 FNU radial engine generated 1,850 hp (1380 kw), and the armament was increased to three ShVak 20 mm cannon. La-7 were well liked by their pilots, and some of Russia's top aces flew them, including Ivan Kozedub, three time hero of the Soviet Union, the number one allied ace with 62 victories, all of them while flying Lavochkin fighters. The last was a La-7 which he received in July, 1944. He shot down 17 German aircraft, one of them being a Messerschmitt Me-262 jet.

The MI-8 HIP is a multi-role transport helicopter capable of carrying troops or supplies as well as conducting armed attackers with rockets and guns. It is often used to resupply guerrillas, insert detachments or provide close air support to attacking units. Designed as a transport helicopter, the Mi-8 proved a multi-purpose machine. The cable external suspension, equipped with the weight-measuring device, makes it possible to carry large size cargoes weighing up to three tons. If required, it became both combat, rescue and artillery observation helicopter.

The Mi-2 (NATO reporting name is "Hoplite") is a small, lightly armored transport helicopter that could also provide close air support when armed with 57 mm rockets and a 23 mm cannon. It was first introduced into the Soviet Air Force in 1965. The Mi-2 is used by mainly former Soviet and Eastern Bloc countries. Most of armed Mi-2 variants were used by Poland. Some were also used by the East Germany, Mi-2T is utility cargo version.

The LTV A-7 Corsair II is a carrier-based subsonic light attack aircraft introduced to replace the United States Navy's A-4 Skyhawk, initially entering service during the Vietnam War. The Corsair was adopted by the United States Air Force, as well as the Air National Guard, to replace the A-1 Skyraider, F-100 Super Sabre and F-105 Thunderchief. The aircraft was also exported to Greece in the 1970s, and Portugal and Thailand in the late 1980s. The A-7 airframe design was based on the successful supersonic F-8 Crusader produced by Chance Vought. It was one of the first combat aircraft to feature a head-up display, an inertial navigation system (INS), and a turbofan engine.

A-7E, Naval carrier-capable equivalent of the A-7D; 529 built.

Yak-38/Yak-38M Forger A

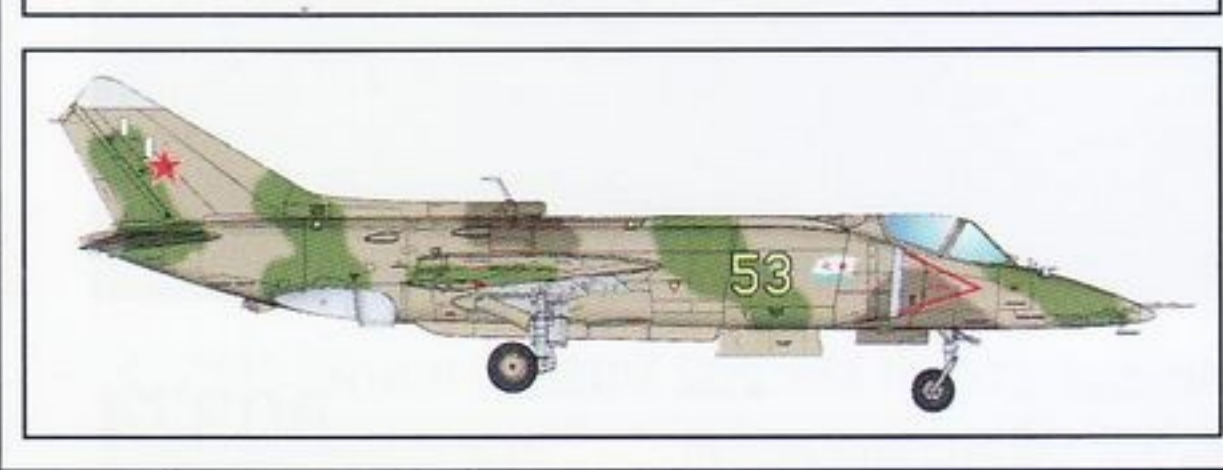

雅克-38 “铁匠” A

1:48

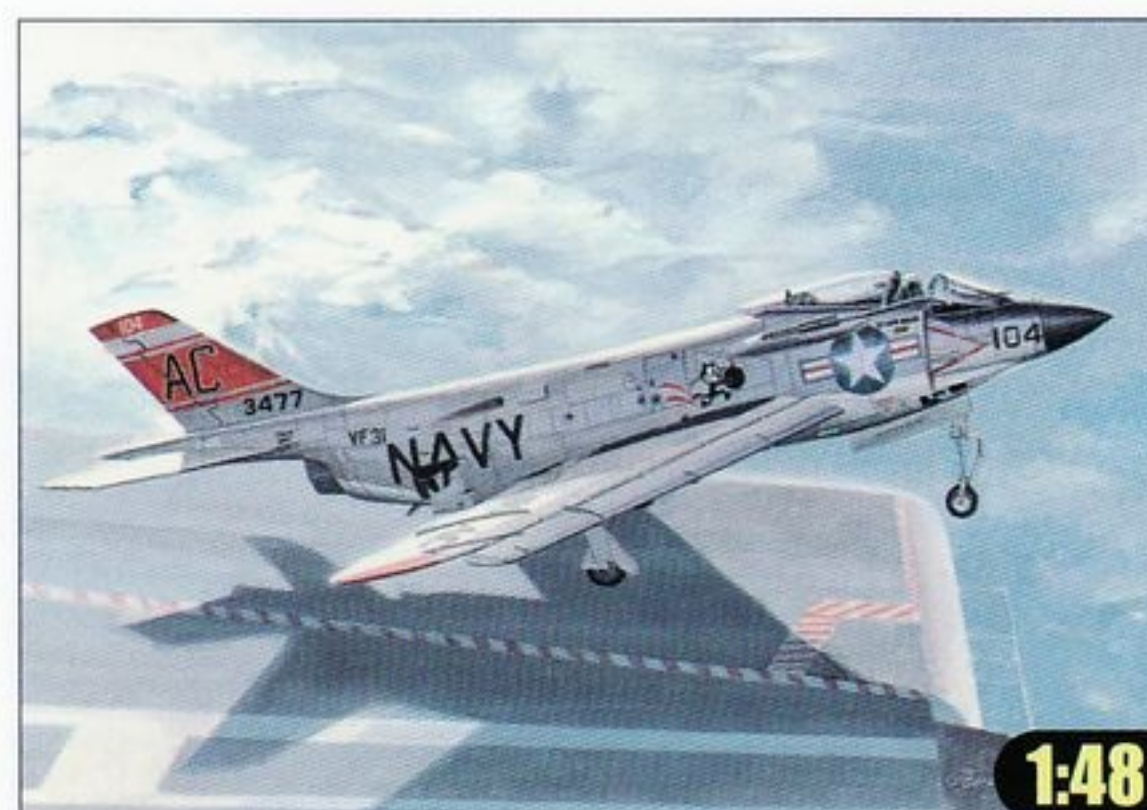

Production of the Yak-38 Forger began in 1975 making it the world's second operational VSTOL aircraft, after the Harrier series. The aircraft's wings are mid-mounted, delta-shaped with blunt tips and a negative slant. There is one turbo engine and two lift jets. There are two exhausts on the bottom of the rear fuselage. Large, semicircular air intakes are below the cockpit well forward of the wings. The fuselage is long and has a pointed nose and tapered tail section.

The Yak-38M was an upgraded version of the Yak-38. Yak-38M begin entered service with the Soviet Naval Aviation after June 1985, a total of 50 Yak-38M were produced.

SBD-3 Dauntless SBD-3“无畏”俯冲轰炸机

The Douglas SBD Dauntless dive bomber became a mainstay of the Navy's air fleet in the Pacific, with the lowest loss ratio of any U.S. carrier-based aircraft. Douglas delivered a total of 5,936 SBD/A-24s between 1940 and the end of production in July 1944.

The SBD Dauntless featured "Swiss cheese" flaps — dive brakes punched with 3-inch holes — so that it could achieve pinpoint accuracy by diving to the target, dropping the bomb and then pulling out of the near-vertical dive.

In addition to the U.S. Navy, Marine Corps and Army Air Forces, the Dauntless served forces in New Zealand and Mexico.

The first enemy ship sunk by the U.S. Navy in World II is credited to a Dauntless from the USS Enterprise. The diving Dauntless went on to destroy 18 enemy warships, including a battleship and six carriers.

The SBD-3 which appeared in March 1941 had O50s in the cowlings. Self-sealing tanks were introduced, as well as protective armour, and the engine was the 1,000 hp R-1820-52.

Produce at the same time in the M1941 KV-1 type, the KV-2 (Also be called the year in M1941 KV-2 type) also threw in the production. The KV-2 characteristic is its quick-fried tower shape. The quick-fried tower that equip 152 millimeters of howitzers reports the hexagon keeps the square form, resembling an enormous box. But, it is said because of the excess, if not on the horizontal plane, dry by heat the tower connect to revolve all and very difficult. Because of such weakness, KV-2 is in actual battle, only used for proceeding to the virtuous soldier the thermodynamic power inhibit, but need not in the battlefield that hour of backstroke break war.

82410 AAVP-7A1 Assault Amphibian Vehicle Personnel AAVP-7A1两栖装甲运输车 1:35

The AAVP7A1 is equipped with a new up gunned weapon station that is more reliable and provide greater fire-power than previous models. It mounts an MK19 40mm grenade launcher and an M2 HB CAL 50 machine gun in coaxial mount. The weapon station allows the gunner to engage targets out to 1,500meters and to traverse a full 360 degree at a speed of 45degree per second.

The improvements incorporated in the AAVP7A1, represent an impressive upgraded performance. The AAVP7A1 carries a crew of three plus 21 combat-equipped troops or 4,536kg of cargo from ship to shore. The addition of applique armor, an automatic fire suppression system, bow plane and improved transmission results in a vehicle with superior capabilities. In order to achieve commonality, the improvements developed for the AAVP7A1 have also been adapted to the AAVC7A1 and AAVR7A1.

The Oscar II nuclear-powered cruise missile submarine, which displaces more than 24,000 tons when under water, is one of Russia's largest and most capable submarines. The submarine is equipped with 24 SS-N-19 cruise missiles with a range of 550km. The missiles could be launched while the submarine is submerged. The torpedo tubes fire both torpedoes and shorter range anti-ship missiles. 11 of the Oscar II submarines were built between 1985 and 1999. Three have been decommissioned and one, the Kursk, sank. Two Oscar II submarines are active with the Northern Fleet and five with the Pacific Fleet.

83401 USS Arizona BB-39 (1941) 美国“亚利桑纳”号战列舰BB-39(1941年) 1:700

The USS Arizona was laid down on 16 March 1914 at the New York Navy Yard; launched on 19 June 1915; sponsored by Miss Esther Ross; and commissioned at her builder's yard on 17 October 1916, Capt. John D. McDonald in command.

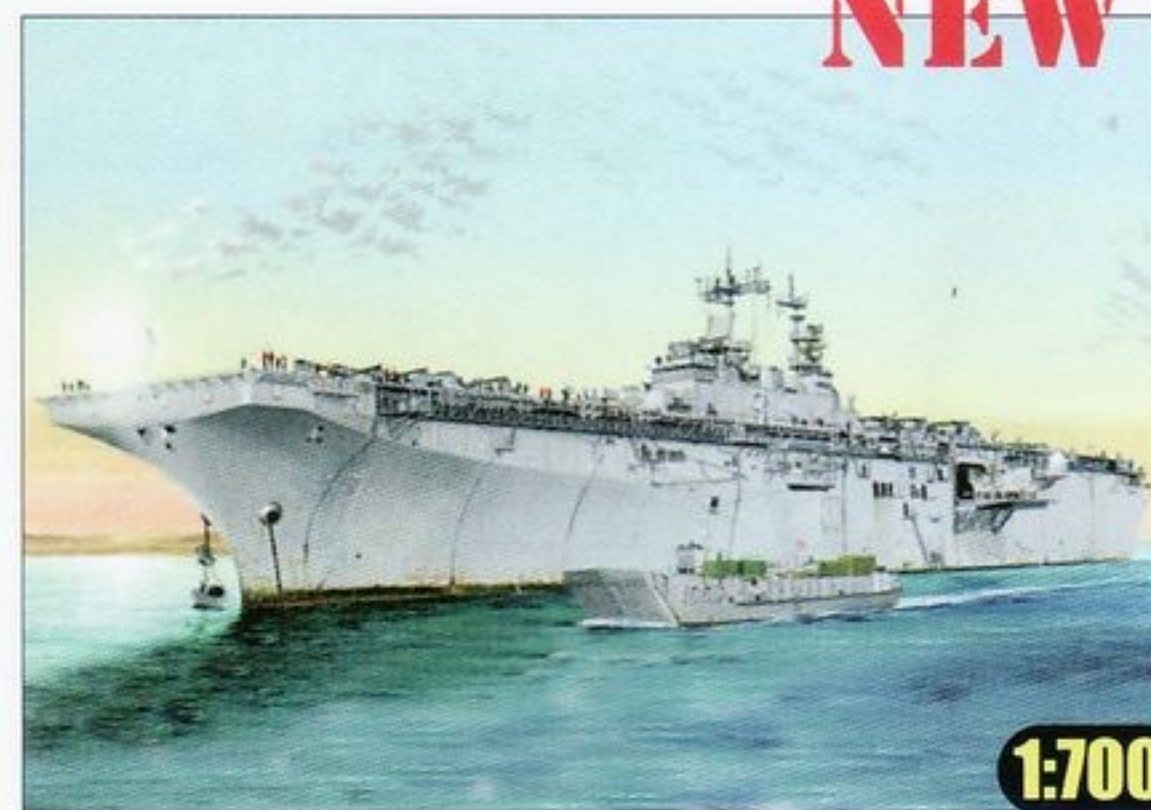

Arizona was a Pennsylvania-class battleship of the United States Navy. The vessel was the third to be named in honor of the 48th state, though the first since its statehood was actually achieved. The USS Arizona is best known for her cataclysmic and dramatic sinking, with the loss of 1,177 lives, during the Japanese attack on Pearl Harbor on 7 December 1941, the event that brought about U.S. involvement in World War II.

TITANIC

lost in the depths for 73 years, its discovery in 1985 and subsequent exploration have made Titanic the best-known ship of all time. The many events relating to the Titanic have made it a legend. It was the subject of Watergate-type investigation in the U.S. The present safety standards applied to shipping are attributed to this event. Harland and Wolfe, builders of the Titanic and its sister ship, the Olympic, were unable to provide drawings, which were destroyed during WWII, or their model which disappeared during the Senate investigations in 1912. The model was, however, constructed from original drawings, photographs taken by survivors and other technical journals, many of which was provided by the Titanic Historical Society resulting in a model indistinguishable from the original ship.
