50 anni di modellismo in scala

Partimmo con l'avventura che si sarebbe chiamata Italeri agli inizi del 1962 e, pur essendo due giovani pieni di entusiasmo e determinazione, non potevamo immaginare che avremmo festeggiato e superato con quest'impresa il mezzo secolo di storia.

Un bel risultato, ripensando al tempo che è trascorso dai nostri primi passi fatti in una piccola officina di Bologna, dove costruivamo stampi per i più svariati articoli in plastica. La stessa officina che ci vide fare il salto nel mondo del modellismo con la produzione per conto terzi di stampi per moto in scala 1/9 e poi, pochi anni dopo, con la costruzione di modelli in proprio.

Da allora il nostro marchio si è via via affermato e i nostri prodotti ci hanno dato grandi soddisfazioni commerciali e periodi di forte sviluppo imprenditoriale. Certo, in 50 anni di storia ci sono stati anche periodi negativi, sempre vissuti, tuttavia, come spunti di crescita e di esperienza.

Oggi ci riempie d'orgoglio l'aver creato dal nulla un marchio conosciuto in tutto il mondo, sinonimo di qualità e di correttezza commerciale.

Tutto questo anche grazie a maestranze di grandi capacità, alcune delle quali rimaste in azienda per 40 anni filati, artefici, insieme a noi, del successo dei prodotti Italeri.

Abbiamo sempre tenuto molto all'aspetto umano del nostro lavoro e altro motivo d'orgoglio è il fatto di essere ancora in armonia con tutti quelli con cui abbiamo avuto rapporti, compresi i nostri concorrenti che, in molti casi, sono perfino diventati nostri clienti.

Oggi, raggiunto il traguardo dei 50 anni di storia, ci fa piacere sapere che il nostro testimone è saldamente nelle mani delle nuove generazioni, pienamente in grado di mantenere e accrescere il nome e il marchio di Italeri nel mondo.

I Fondatori di Italeri Spa

Gian Pietro Parmeggiani
Giuliano Malservisi

50 years of scale modelling

We started off on the adventure that we would call Italeri in early 1962 and, despite being two young people full of enthusiasm and determination, we could never have imagined celebrating and surpassing 50 years of history with this company.

It is a great result, when you think of the time that has passed since we took our first steps in a small workshop in Bologna, where we built moulds for a wide variety of plastic items. That was the same workshop where we took the leap into the world of scale modelling, with the production of moulds for motorbikes in 1:9 scale for third parties, and then, a few years later, with the construction of our own models. From

that time onwards, our brand has gradually gained recognition and our products have brought us both great commercial success and periods of significant business expansion. Of course, in 50 years of history, there have also been negative periods, nevertheless these have always been accepted as starting points from which to learn and grow. Today, we are proud to have created, out of nothing, a brand that is well-known throughout the world, synonymous with quality and commercial reliability. All this has been possible also thanks to the great skills of our workers, some of whom have been with the company for 40 consecutive years; together with us, they have created the success of Italeri products. We have always given great importance to the human side of our work and another reason to be proud is the fact that we are still on very good terms with all those we have had relations with, including our competitors who have, in many cases, even become our customers.

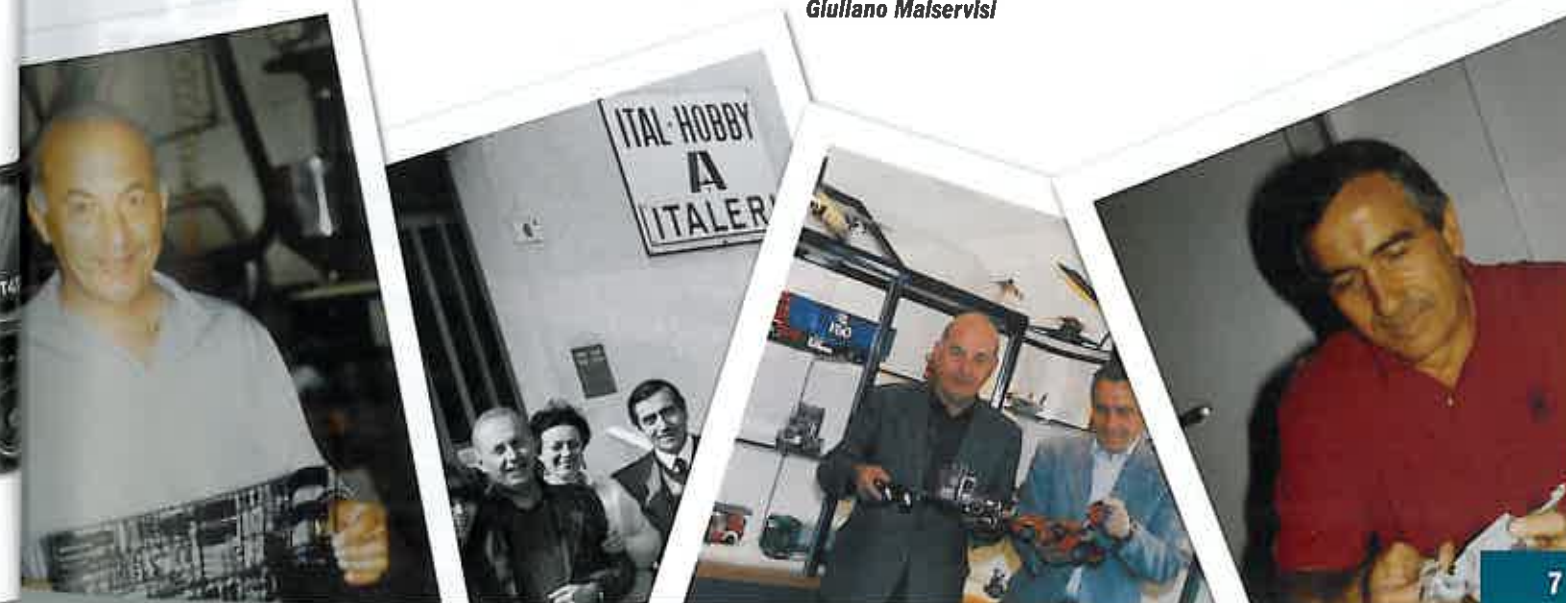

Today, having reached the goal of 50 years in business, we are pleased that our heritage is firmly in the hands of the new generations, who are fully able to maintain and enhance the Italeri name and brand throughout the world.

Italeri SpA Founders

Gian Pietro Parmeggiani
Giuliano Malservisi

Italeri reserves the right, at its sole discretion and at any time, upon receipt of purchase orders, to modify the availability of the requested items, the release date of new items or to cancel the same. The assembled models, dioramas, and historic figures depicted in our catalogue are for reference only, to show how the final result should look like.

Viaggio al centro del modello

Sette anni di titoli prestigiosi, modelli selezionati per qualità e valenza storica, arricchiti dal manuale storico fotografico (PRM: photographic reference manual) contenente: un'accurata sezione storica, un viaggio fotografico nei dettagli del soggetto reale, disegni tecnici ed esplosi originali e i nostri curatissimi profili a colori.

A journey right to the heart of the model

Seven years of prestigious titles, in which models have been selected on a quality and historical worthiness basis, enriched by a historical and photographic manual (PRM: photographic reference manual) based on: an accurate historical section, a photographic journey to discover the details of the real subject, enriched with technical drawings, concept drawings and our extremely accurate colour profiles.

Un preciso piano di volo

Il rapporto che unisce l'uomo al volo è antico e profondo, tra paura e attrazione fatale, limiti da superare e nuove tecnologie. La Storia dell'aeronautica attraverso un'incredibile collezione di modelli in scala e nuove linee: Aviation Glory, Aerobatic Teams, Special Colors e Historic Upgrade.

A precise flight plan

The relation which joins mankind to flying is ancient and profound, with its fears and fatal attraction, with its limits to be overcome and the new technologies. The Air Force history is presented through an outstanding collection of scale models and new collections: Aviation Glory, Aerobatic Team, Special Color and Historic Upgrade Series.

Cura del particolare e dettagli maniacali sono una costante dei modelli Italeri. Le nostre scatole, corredate da numerosi parti opzionali, come armamenti o parti strutturali permettono di realizzare differenti versioni. Fondamentale è l'offerta di livree e colorazioni.

il più possibile inedite. Queste, supportate da un'ampia ricerca iconografica, ci consentono la realizzazione di decalcomanie ricche e originali, garantendo numerose versioni di reparti o nazionalità.

Care for the specifics and sophisticated detail are a constant feature of Italeri models. Our kits contain numerous alternative pieces: weapons or structural parts so that you can make different versions.

The choice of liveries or colours is essential, and even better if they have never been produced before. These are backed up by in depth research that is then used to produce highly detailed and accurate transfers. We generally offer no fewer than four or five types of division or nationality.

Una collezione unica

Leggeri come l'aria, irreali, in equilibrio tra magia e alta tecnologia. Così ci seducono e per questo vantiamo la collezione più completa.

A unique collection

Light as the air, unreal, in balance between magic and high technology. That is the way they attract us, and that is why we boast the most complete collection of all.

Dal Panther al Lince

Autoblindo, carri armati, semicingolati, veicoli da trasporto, mezzi anfibi, pezzi di artiglieria. Una vasta gamma che comprende i più importanti mezzi militari, dai tedeschi agli americani, dai russi agli inglesi e una linea unica di soggetti italiani.

From Panther to Lince

Armored cars, tanks, half tracks, transport vehicles, amphibians, pieces of artillery. A wide range which includes the most important military vehicles, from the Germans to the Americans, from the Russians to the British and a unique collection of Italian subjects.

La plastica trova una delle applicazioni più felici nella riproduzione di questa tipologia di modelli: il livello di dettaglio ottenuto su questi kit ne sono la migliore testimonianza. L'utilizzo delle resine, dei particolari fotoincisi e delle ultime tecnologie ci hanno permesso di raggiungere un livello di realismo e cura del dettaglio senza precedenti.

L'originalità dei soggetti è uno dei punti di forza di questa gamma: accanto ai carri armati più famosi vantiamo una linea unica di mezzi italiani. Dal piccolo carro L6, al più noto M13/40, alla Sahariana, al cannone anticarro "elefantino" per arrivare ad una vera e propria novità nel mondo del modellismo: la Fiat 1100 Coloniale.

Plastic is one of the best materials used to produce copies of this type of models, as it is well witnessed by the detail level gained with these kits. The use of resins, photo-etched frets and of the newest technologies have allowed us to gain an unprecedented level of realism and attention to details.

The originality of the subjects is one of the strong points in this collection: next to the most famous tanks we boast a unique range of Italian vehicles. From the small Carro Armato L6 to the more well-known M13/40, from the "Sahariana" to the antitank gun "elefantino" to an out-and-out innovation in the world of modelling: the Fiat 1100 Coloniale.

Piccoli grandi uomini

Uomini in uniforme che hanno fatto la Storia del XX secolo. Dal Nord Africa, alla Russia, alla Normandia, al Pacifico, la varietà dei soggetti proposti permette di ricreare i più celebri scontri della Seconda Guerra Mondiale. Pose originali e dinamiche li rendono ideali per wargames e diorami.

Little great men

Men in their uniforms that made the history of the 20th century. From North Africa, to Russia, Normandy, the Pacific Ocean, the variety of the characters presented allows us to recreate the most renowned conflicts of the Second World War. Unusual and dynamic poses make them an ideal complement for wargames and dioramas.

Model Sets

**L'unica cosa
che non contengono
è il tuo talento**

I soggetti più famosi, ricercati e particolari per una linea che vuole avvicinare al mondo del modellismo in modo semplice e divertente. Con un prodotto completo di colori, istruzioni semplici e dettagliate, colla e pennello vogliamo trasformare una voglia passeggera in una passione per la vita.

I kit, che coprono ogni fascia di prezzo, rappresentano il più classico dei percorsi del vero modellista.

**The only feature
not included
is your talent**

The most famous and particular subjects for a line of products that wishes to bring you into the world of model building in a fun, simple way. With products complete with colors, simple and detailed instructions, glue and brush, we want to turn your temporary whim into a life passion. Kits are available in all price ranges and are the most classic steps of the true model builder.

My First Model Kit

Tutto quello che occorre per costruire il primo modello

- DVD contenente un video che vi guiderà passo a passo nella costruzione del modellino
- tronchesine per separare i pezzi
- pinzette di precisione
- lima
- colla atossica
- colori acrilici
- pennello
- il tuo primo, indimenticabile kit

Everything you need to build your first model

- a DVD which contains a video that will guide you step by step in the building of the model.
- sprue cutter
- precision tweezer
- grade
- non toxic glue
- acrylic colors
- brush
- your first, unforgettable kit

Complete set for adults and teens with tutorial DVD to approach the modelling world

Spingarda a mantello Spingarde with mantlet

Tra le numerose macchine da guerra progettate da Leonardo troviamo pezzi d'artiglieria come le spingarde.

I disegni presenti sul foglio 32r del Codice Atlantico nascondono intuizioni geniali per l'epoca e rappresentano due versioni di spingarde. La prima veniva montata su un cavalletto e trattenuta con pioli di legno, il nostro modello riproduce il secondo progetto: una spingarda dotata di un fusto ruotato che permetteva il trasporto e di una tettoia o mantello che aveva lo scopo di proteggere l'artigliere. Originariamente concepite per il lancio di pietre, le spingarde vennero poi utilizzate con l'invenzione della polvere da sparo per lanciare proiettili e dardi di varia natura.

Among the several war machines designed by Leonardo, there are true pieces of artillery such as spingardes.

The drawings on the 32r sheet of the Atlantic code hide ingenious insights for that age and represent two different versions of the spingardes. The first was mounted on a tripod and held with wooden pegs along a perforated ring. Our model is a reproduction of the second project: a spingarde with a rotated barrel that allowed the transport of a shed or mantlet, which was intended to protect the gunner. Originally designed for the launch of stones, spingardes were then used with the invention of gunpowder to launch bullets and darts of various types. In fact, some studies related to bullets and recipes of gunpowders are represented on Leonardo's sheet.

Ornitottero Ornithopter

L'ornitottero è una macchina pensata per ottenere il volo ad imitazione degli uccelli, attraverso il movimento delle ali. Nel 1485, Leonardo da Vinci iniziò a studiare il volo di vari uccelli. Egli comprese che un uomo non disponeva della forza necessaria ed era troppo pesante per volare semplicemente con delle ali indossate sulle braccia, quindi progettò una macchina, dove un uomo sdraiato su una panca avrebbe mosso due grandi ali membranose grazie ad una serie di leve, pedali e pulegge.

The ornithopter is a machine designed to fly by the flapping of its wings in imitation of birds. In 1485, Leonardo da Vinci began to study the flight of birds. He grasped that humans are too heavy, and not strong enough, to fly using wings simply attached to the arms. Therefore he sketched a device in which the aviator lies down on a plank and works two large, membranous wings using hand levers, foot pedals, and a system of pulleys.

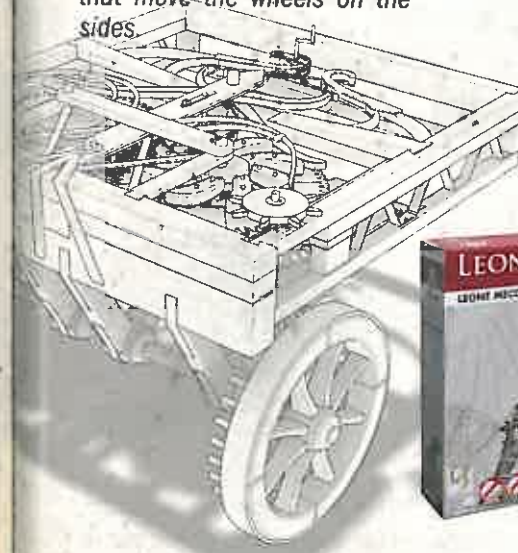

**3101**

Automobile Self-propelling cart

This model represents one of Leonardo da Vinci's most intriguing designs. It has been known as "Leonardo's Automobile" but recent studies consider it one of the first robots in history. The machine is drawn on folio 812/r of the Codex Atlanticus together with other devices. The robot's engine is hidden internally: a spring held fast by a stopping mechanism transmits motion to the gears that move the wheels on the sides.

Questo modello rappresenta uno dei più affascinanti progetti di Leonardo da Vinci. È conosciuta come l'Automobile di Leonardo in realtà recenti scoperte hanno verificato che si tratta di uno dei primi robot della storia. La macchina è disegnata sul foglio 812/r del Codice Atlantico insieme ad altri congegni. Il motore del robot è nascosto all'interno, una molla bloccata da un freno meccanico trasmette l'energia agli ingranaggi che possono far muovere le ruote laterali.

**3102**

Leone Meccanico Mechanical Lion

La confezione contiene un libretto storico, scientifico con riproduzioni 3D

The box contains an historical scientific booklet with 3D drawings

Sui fogli 90/v e 91/r del Codice Madrid sono disegnati "strani" meccanismi non legati al trattato di meccanica e spesso senza testo esplicativo. La loro analisi ha portato alla ricostruzione di congegni che permettono i movimenti robotici di un misterioso animale, un leone meccanico. Il leone, omaggio del Papa Leone X e della città di Firenze, fu portato a Lione, in Francia, e il 12 luglio 1515 alla fine di una sorprendente e magica camminata di fronte al Re di Francia Francesco I, si fermò facendo cadere dei gigli. Può essere considerato tra i primi robot con sembianze animali mai costruiti.

Sheets 90/v and 91/r of the Madrid Code include drawings of "strange" mechanisms that are not linked to the treatise on mechanics and often have no explanatory text. Analysing them led to the reconstruction of mechanisms enabling a mysterious animal, a mechanical lion, to move robotically. The lion, a gift from Pope Leone X and the town of Florence, was taken to Lyon, in France; on July 12 1515, at the end of a surprising, magical walk before the King of France, Francis I, it stopped knocking some lilies over. It can be considered one of the first animal-like robots ever built.

< 31.5 cm x 17 cm x 7.6 cm >

3103

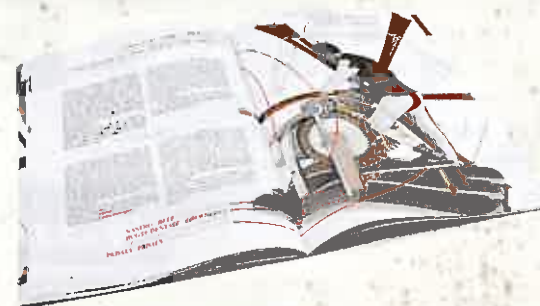

Barca a pale Paddle Boat

Sul foglio 945/r/ del Codice Atlantico Leonardo da Vinci ha disegnato numerosi congegni per il progetto di una barca meccanica. Uno o più piloti possono azionare due pedali alternativamente.

I pedali trasportano il moto alternato a un meccanismo centrale. Qui il moto alternato viene trasformato in moto lineare e una serie di ingranaggi portano poi il movimento alle due grosse pale poste ai lati della barca. Il meccanismo centrale è disegnato in modo dettagliato da Leonardo in un altro foglio, il 30/v/, e il meccanismo funziona tramite delle molle nascoste nelle due ruote principali che ingranano alternativamente gli anelli esterni trasformando il moto da alternato a lineare.

The box contains an historical scientific booklet with 3D drawings

< 19.7 cm x 8.5 cm x 8 cm >

3104

Bombarda multipla Multi-cannon Gunship

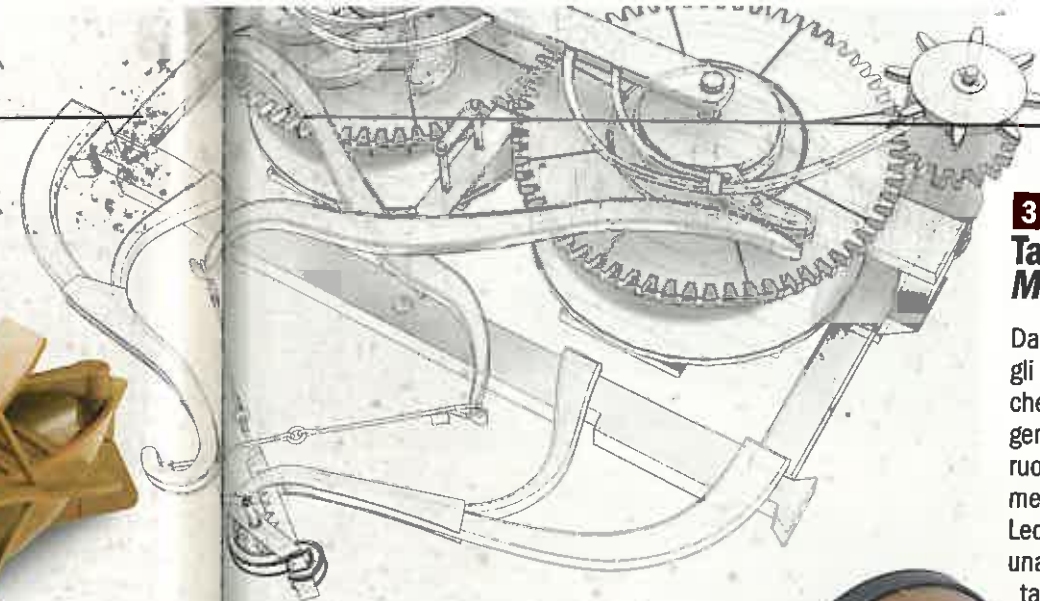

Il primo foglio del Codice Atlantico di Leonardo da Vinci presenta uno strano e misterioso progetto. Analizzando i dettagli si scopre che si tratta di un sistema circolare con sedici cannoni. Il meccanismo centrale fa pensare a un'imbarcazione mossa da una doppia pala. Questa arma segreta quindi potrebbe essere una nave da guerra circolare capace di ruotare su se stessa e di sparare a 360 gradi.

Il sistema di ingranaggi centrale permette di ruotare le pale che possono muoversi anche indipendentemente tra loro. Se mentre si spara la nave gira su se stessa, i marinai hanno la possibilità di aprire, pulire e ricaricare il cannone che è pronto di nuovo a sparare. Uno scudo superiore circolare potrebbe proteggere il mezzo, rendendolo una corazzata con 18 bombarde.

The first page of Leonardo's Codex Atlanticus shows a mysterious drawing. Analyzing its details, we discover that it is a circular mechanism with sixteen radial guns. The central mechanism looks like a boat moved by a double paddle. This secret weapon could be a circular warship that could rotate and fire in a 360 degree arc. The central gear wheels allowed for independent movement of the two mechanical paddles. If while firing the ship rotates, the crew can open, clean and reload the gun that is quickly ready to fire again. A round shield can protect the vessel, making it a warship with 18 bombards.

< 20.5 cm x 5 cm >

3105

Tamburo automatico Mechanical Drum

Dall'analisi dei disegni e degli scritti di Leonardo, emerge che tra le tante attività del genio la musica ricopriva un ruolo fondamentale. Tra le numerose soluzioni inventate da Leonardo per produrre suoni, una delle più affascinanti è il tamburo automatico. Progettato per l'utilizzo in varie circostanze, dalle

parate cittadine alle azioni militari. Due grandi rulli trasmettono il movimento alle aste laterali che battono la tela, il ritmo variava cambiando la posizione dei pioli presenti sui rulli. Poteva essere trainato azionando il movimento tramite le ruote (1), oppure utilizzato da fermo mediante una manovella (2).

< 14.5 cm x 12.5 cm x 9 cm >

By analysing Leonardo's drawings and writings, it can be said that, among his many activities, music held a key role. Among the several solutions invented by Leonardo to produce sounds, one of the most fascinating is certainly represented by the automatic drum. It was designed to be used in various circumstances, from town parades to military actions. Two big rolls transmit the movement to the lateral bars, which beat the canvas, the rhythm varies by changing the position of the pegs on the rolls. It could be drawn by activating its wheels (1), or it could be used, keeping still, by moving a handle (2).

1

< 22.5 cm x 11 cm x 9 cm >

3106

Catapulta Catapult

La catapulta è un'arma da guerra già utilizzata nel medioevo che viene rivisitata e migliorata da Leonardo. Come dimostrano i disegni sul foglio 140a/br del Codice Atlantico, il meccanismo di carica viene azionato tramite due grandi braccia di legno flessibile che permettono di aumentare la potenza di lancio. Terminate le operazioni di ricarica, il proiettile di pietra o di metallo viene collocato sull'estremità a cucchiaino della lunga leva. Liberando il fermo di sicurezza si aziona il lancio immediato del proiettile verso l'obiettivo.

A catapult is a weapon which was already used in medieval times, and which was then revisited and improved by Leonardo. As shown in the drawing (sheet 140a/br from the Atlantic Code), the loading mechanism is activated through two big flexible wooden arms, which permit an increase in the launching strength. Once the loading operations are completed, the projectile made of stone or metal is placed on the spoon-shaped edge of the long lever. By releasing the safety lock, the immediate launch of the projectile towards the target is activated.
