THE PIGMENTS DVD

This first volume focuses on all of the Pigment techniques. The Mig Pigments have revolutionized modelling during the past years and may be one of the most important changes for the hobby during the XXI century. Thousands of modelers throughout the world now use Pigments and this is why the first chapter is devoted exclusively to this new medium. How to make rust, dust, mud, ashes, smoke, fading and more is just part of this DVD. How to use the popular FIXER and the THINNER with the pigments is also explained. Throughout almost 60 minutes of footage you will discover all the secrets of Pigments along with each tip and technique through incredible detail under the best image quality generated by Mig Jimenez.

Next DVD projects:

Vol.2 Washes, Filters and Oils
Vol.3 Paint Chips and Scratches
Vol.4 Using Photobash Brass
Vol.5 Winter camouflage

NEW

-HIGH QUALITY IMAGES

-All techniques

-58 minutes movie

-Easy navigation

-Intro by Adam Wilder

-Mini guide book

-List of products

Night Vision is here to help you see through the darkness of modeling using high resolution images with the most advanced video technology. The high definition of each image will allow you to see all of the details within each process in real time from the author's point of view. The viewer can pause the image at any moment appreciating all of the details and effects. Clear professional narration will help clarify the complicated steps. For now on simple paper magazines will not be good enough for unsatisfied modelers.
