The Douglas C-48 was the designation given to 36 Pratt & Whitney powered DC-3s impressed by the USAAF after the Japanese attack on Pearl Harbor. They were a mix of aircraft already in service (28 aircraft) and aircraft still in production (8 aircraft), and had quite a mix of facilities, including three with only ten seats that were used as staff transports. Another six Pratt & Whitney aircraft were impressed as C-52s, and two as C-68s.

The MiG-21 'Fishbed' is a Soviet supersonic jet fighter aircraft designed by the Mikoyan-Gurevich Design Bureau. More than fifty countries over four continents have flown the MiG-21, and was still serving many nations more than half-century after its maiden flight.

In all its variants the MiG-21 made aviation history as the most produced supersonic jet aircraft, the most produced combat aircraft since the Korean War, and had the longest production run of any combat aircraft.

The Northrop T-38 Talon is an American supersonic jet trainer. It was the world's first supersonic trainer and to date, is also the most produced. It remains in service as of 2010 in air forces throughout the world.

The United States Air Force (USAF) is the largest user. In addition to USAF pilots, the T-38 is used in the United States by NASA astronauts, with the aircraft bailed to NASA from USAF. The U.S. Naval Test Pilot School is the principal U.S. Navy operator (other T-38s were previously used as USN aggressor aircraft until replaced by the similar F-5 Tiger II), as well as some NATO pilots participating in joint training programs, also fly the T-38.

The Su-9's fuselage and tail surfaces resembled those of the Su-7, but unlike the swept wing of that aircraft, the 'Fishpot' used a 53° delta wing with conventional slab tailplanes.

The Su-9 had primitive R1L radar in the shock cone and was armed with four K-5 (AA-1 'Alkali') beam-riding air-to-air missiles. Like all beam-riders, the K-5 was so limited as to be nearly useless for air-to-air combat. Unlike the Su-7 and later Su-15, no Su-9 carried cannon armament, although two fuselage pylons were reserved for the carriage of drop tanks.

The Sukhoi Su-30MKK Flanker-G is a modification of the Su-27SK since 1999. It is considered an upgraded version of Sukhoi Su-30. It was jointly developed by Russia and China. It is a heavy class, all-weather, long-range strike fighter, comparable to American F-15E. Su-30MK2 is a further improvement to SU-30MKK with upgraded avionics and maritime strike capabilities. The MKK and MK2 are currently operated by the People's Republic of China.

The Panzerkampfwagen IV (Pz.Kpfw. IV) Sd Kfz 161, commonly known as the Panzer IV, was a medium tank developed in Nazi Germany in the late 1930s and used extensively during the Second World War. Its ordnance inventory designation was Sd.Kfz. 161.

Designed as an infantry-support tank, the Panzer IV was not originally intended to engage enemy armour—that function was performed by the lighter Panzer III. However, with the flaws of pre-war doctrine becoming apparent, and in the face of Soviet T-34 tanks, the Panzer IV soon assumed the tank-fighting role of its increasingly obsolete cousin. The most widely manufactured and deployed German tank of the Second World War, the Panzer IV was used as the base for many other fighting vehicles, including the Sturmgeschütz IV tank destroyer, the Wirbelwind self-propelled anti-aircraft weapon, and the Brummbär self-propelled gun, amongst others.

The Oshkosh M-ATV is an Mine Resistant Ambush Protected(MRAP) vehicle developed by the Oshkosh Corporation of Oshkosh, Wisconsin for the MRAP All Terrain Vehicle (M-ATV) program. It is designed to provide the same levels of protection as the larger and heavier previous MRAPs but with improved mobility and it is intended to replace M1114 HMMWVs.

The M-ATV utilizes the Medium Tactical Vehicle Replacement (MTVR) chassis and TAK-4 suspension with the Plasan designed armored hull developed for the Northrop Grumman/Oshkosh JLTV Technology Development (TD) phase proposal. The V-shaped Plasan armored hull offers protection for the occupants from IED attacks while a central tire inflation system (CTIS) and run-flat inserts allow the M-ATV to travel at least 30 miles at 30 mph even if two tires lose pressure. The vehicle can also take a 7.62 mm round to its engine oil/coolant/hydraulic system and continue to drive for at least one kilometer. The Stat-X engine fire suppression system provides for further survivability.

The 9A52-2 Smerch-M is a Soviet heavy multiple rocket launcher. The system is designed to defeat personnel, armored, and soft-skinned targets in concentration areas, artillery batteries, command posts and ammunition depots. It was created in the early 1980s and entered service in the Soviet Army in 1989. When first observed by the West in 1983, it received the code MRL 280mm M1983. It is expected to be superseded by the 9A52-4 Tornado.

The 9A52-2 launcher with all supporting equipment, including the 9T234-2 Transloader, and the 1K123 Vivary Fire Control System, is referred to as the complex 9K58. The first export customer for the 9A52 (12-round) system was Kuwait, with 27 systems delivered, with the United Arab Emirates being the second customer. China has also purchased this system from Russia. The weapon's accuracy is also claimed to have been improved.

M901 Launching Station & AN/MPQ-53 Radar set of MIM-104 Patriot SAM System (PAC-2)
美国MIM-104C爱国者导弹系统(PAC-2)及AN/MPQ-53雷达

The MIM-104 Patriot is a surface-to-air missile (SAM) system, the primary of its kind used by the United States Army and several allied nations. It is manufactured by the U.S. defense contractor Raytheon and derives its name from the radar component of the weapon system. The AN/MPQ-53 at the heart of the system is known as the "Phased Array Tracking Radar to Intercept On Target" or the bacronym PATRIOT. The Patriot System replaced the Nike Hercules system as the U.S. Army's primary High to Medium Air Defense (HIMAD) system, and replaced the MIM-23 Hawk system as the U.S. Army's medium tactical air defense system. In addition to these roles, Patriot has been given the function of the U.S. Army's anti-ballistic missile (ABM) system, which is now Patriot's primary mission.

The 2P19 TEL (Transporter-Erector-Launcher) was a unified ballistic missile system fielded by the Soviet Missile and Artillery Forces during the early 1960s. The system paired an 8K14 R-17 (NATO name “Scud-B”) missile with the 2P19 TEL vehicle; improved version of the earlier 8U218 TEL. The complete missile system entered service in March 1962 as the 8K14 Elbrus (NATO name: “SS-1c Scud B”) but production halted in October of that year when production of the 2P19’s parent heavy tank chassis was halted. The R-17 missile eventually reappeared on the improved 9P117M wheeled MAZ TEL.

The T-64 was conceived in Kharkov as the next-generation main battle tank by Alexander A. Morozov, the designer of the T-54.A revolutionary feature of the T-64 is the incorporation of an automatic loader for its 125-mm gun,allowing a crewmember's position to be omitted, and helping to keep the size and weight of the tank down, and the T-64B of 1976 would be able to fire a guided antitank missile through its gun barrel.

The T-64 would be used only by the Soviet Army and never exported, unlike the T-54/55. It was superior to these tanks in most qualitative terms, until the introduction of the T-72B model in 1985. The tank equipped elite and regular formations in Eastern Europe and elsewhere, the T-64A model being first deployed with East Germany's Group of Soviet Forces in Germany (GSFG) in 1976, and some time later in Hungary's Southern Group of Forces (SFG). By 1981 the improved T-64B began to be deployed in East Germany and later in Hungary.

The T-10 was a Soviet heavy tank of the Cold War, the final development of the KV and IS tank series. It was accepted into production in 1952 as the JS-10 , but due to the political climate in the wake of Stalin's death in 1953, it was renamed T-10., Main armament 122 mm D-25TA gun and front armored 250mm . henceforth Had carried out many times modernized improvement .In 1957, The final type is T-10M,improved version with longer M-62-T2 L/43 gun with five-baffle muzzle braker, machine guns replaced with 14.5 mm KPVT , infrared night vision equipment, NBC protection. Overall length is 10.29 m.

The 1K17 Szhatie is a self-propelled laser vehicle of Russian origin. The platform uses a MSTA-S chassis with a battery of laser projectors mounted in the turret. It was developed by the Soviet Union in order to disable the optical-electronic equipment of enemy missiles, ground and aerial vehicles.

The "tank" used an intense laser beam to disable the optical-electronic equipment of the enemy vehicles. This was created by focusing light through 30 kg of artificial rubies which made the whole system very expensive to produce. The energy to power the laser was provided by a generator and an auxiliary battery system. The lenses themselves were able to operate in different environments by moving metal caps closer to protect the lens. It was also equipped with a 12.7mm NSV machine gun to defend itself against attacks by infantry and air.

The Iosif Stalin tank (or IS tank, named after the Soviet leader Joseph Stalin), was a heavy tank developed by the Soviet Union during World War II. The tanks in the series are also sometimes called JS or ИС tanks.

The heavy tank was designed with thick armour to counter the German 88 mm guns, and sported a main gun that was capable of defeating the German Tiger and Panther tanks. It was mainly a breakthrough tank, firing a heavy high-explosive shell that was useful against entrenchments and bunkers. The IS-2 was put into service in April 1944, and was used as a spearhead in the Battle for Berlin by the Red Army in the final stage of the war.

The 9K33 Osa is a highly mobile, low-altitude, short-range tactical surface-to-air missile system. "9K33" is its GRAU designation. Its NATO reporting name is SA-8 Gecko.

The SA-8 was the first mobile air defence missile system incorporating its own engagement radars on a single vehicle.

All versions of the 9K33 feature all-in-one 9A33 transporter erector launcher and radar (TELAR) vehicles which can detect, track and engage aircraft independently or with the aid of regimental surveillance radars. The 6-wheeled transport vehicles BAZ-5937 are fully amphibious and air transportable. The road range is about 500km.

Chinese Type 59 中国59式中型坦克

The Type 59 main battle tank is a Chinese licensed production version of the Soviet T-54A. The Soviet Union and Chinese governments agreed on the transfer of T-54A technology in 1956. At the same time, the first tank manufacturing facility (617 Factory) was built up in Baotou, Inner Mongolia under the help of Soviet engineers. In 1958, the first Chinese-made T-54A using Soviet components rolled out from the assembly line.

The first GATO was laid down 5 Oct 1940 by the Electric Boat Co., and commissioned 31 December 1941. GATO departed 16 February 1942 for Pearl Harbor via the Panama Canal and San Francisco. On her first war patrol from Pearl Harbor, she was ordered to patrol the western approaches to Midway, taking station 280 miles westward during that historic victory. During her fourth war patrol, GATO torpedoed and sank 3 cargo ships off New Georgia, Solomon Islands. On 30 November she made a coordinated attack with RAY, sinking the cargo ship COLUMBIA MARU. GATO departed Milne Bay 2 February 1944 to conduct her eighth war patrol in the Bismarck-New Guinea-Truk area. She sank a trawler, a transport, and a cargo ship. Two other trawlers were destroyed by her gunfire before she returned to Pear Harbor. She sank a coast defense ship on 14 February 1944 and cargo ship on 21 February, and then returned to Guam. GATO decommissioned 16 March 1946.

GATO received the Presidential Unit Citation in recognition of daring exploits during war patrols four through eight and 13 battle stars for service in World War II

HMS NELSON was laid down at Armstrong-Whitworth's shipyard in Newcastle-on-Tyne on December 28th 1922, launched on September 3rd 1925, and commissioned on August 15th 1927.

At the outbreak of World War II in September 1939, NELSON was serving as flagship of the Home Fleet. In March 1941 NELSON supported the landing raid on the Lofoten Islands, Norway, against German factories producing fish oil and glycerine. The same year NELSON transferred to the Mediterranean, taking part in one of the Malta Convoys. In November 1942, NELSON was active in the "Operation Torch" landings in French North Africa. In July 1943, NELSON supported the Allied invasion of Sicily "Operation Husky", and the Salerno landing in September 1943. On September 29th 1943, General Dwight D Eisenhower, on behalf of the Allies, and Marshal Badoglio of Italy signed the Italian surrender agreement aboard NELSON.

In 1944, NELSON took part in the Normandy landings, subsequently transferring to the Indian Ocean to participate in the war on Japan in August and September 1945. The Japanese surrender of Malaya was signed aboard NELSON on September 3rd 1945.

After the war ended in 1945, NELSON was retired from active service and used on training duties until 1947, becoming a bombing target before being sold for scrap in 1948.

HMS RODNEY was laid down at the Cammell Laird shipyard in Birkenhead on December 28th 1922, launched on December 17th 1925, and commissioned on November 10th 1927. Named after the 18th and 19th century British Admiral Rodney.
During the Norwegian campaign of April 1940 RODNEY was hit by a 500kg bomb dropped by a German bomber, but was repaired and continued in service. In late 1940 RODNEY searched for but missed the German Pocket Battleship ADMIRAL SCHEER following its sinking of JERVIS BAY. On May 27th 1941 RODNEY took part in action which resulted in the sinking of the German battleship BISMARCK, firing almost 380 rounds of 16-inch shells. From late 1941 through 1942 RODNEY was deployed to the Mediterranean as a convoy escort with sister ship NELSON. Following the invasion of Sicily in 1943, RODNEY was the first British battleship to enter Malta since 1940, and was active in the Salerno landing of September 1943.
RODNEY was held in reserve at the Normandy landings of June 6th 1944, but from June 7th until July 9th 1944 RODNEY pounded the beachhead with more than 500 16-inch rounds and many hundreds of 6-inch and 4.7-inch shells.
After the war ended in 1945, RODNEY was transferred to Reserve and sold for scrap in 1948.

HMS Belfast is a museum ship, originally a Royal Navy light cruiser, permanently moored in London on the River Thames and operated by the Imperial War Museum.

Construction of Belfast, named after the capital city of Northern Ireland and one of ten Town class cruisers, began in December 1936. She was launched on St Patrick's Day, 17 March 1938. Commissioned in early August 1939 shortly before the outbreak of the Second World War, Belfast was initially part of the British naval blockade against Germany.In November 1939 Belfast struck a German mine and spent more than two years undergoing extensive repairs. Returning to action in November 1942 with improved firepower, radar equipment and armour, Belfast was the largest and arguably most powerful cruiser in the Royal Navy at the time. Belfast saw action escorting Arctic convoys to the Soviet Union during 1943 and in December 1943 played an important role in the Battle of North Cape, assisting in the destruction of the German warship Scharnhorst. In June 1944 Belfast took part in Operation Overlord supporting the Normandy landings. In June 1945 Belfast was redeployed to the Far East to join the British Pacific Fleet, arriving shortly before the end of the Second World War. Belfast saw further combat action in 1950-52 during the Korean War and underwent an extensive modernisation between 1956 and 1959. A number of further overseas commissions followed before Belfast entered reserve in 1963.

USS KITTY HAWK, lead ship of the Kitty Hawk class of multi-role aircraft carriers, was laid down in December 1956 and constructed by the New York Shipbuilding Corporation at Camden New Jersey. Launched on May 21st 1960 and commissioned at the Philadelphia Naval Shipyard on April 29th 1961, KITTY HAWK was originally designated CVA-63 (Aircraft Carrier, Attack, #63), re-designated CV-63 (non-nuclear) in May 1975.

KITTY HAWK saw action in campaigns ranging from Vietnam to the Gulf Wars. The super-carrier provided a base for air strikes against Iraqi targets in 1992/93, enforcement of Iraqi no-fly zones in 1999, and Operation Iraqi Freedom in 2003. Refits were carried out at Bremerton in 1977, 1982 and 1998, and from 1987 to 1991 KITTY HAWK was overhauled under the Service Life Extension Program (SLEP) at Philadelphia.

During its long service life KITTY HAWK's aircraft arm has included A-1 Skyraider, A-4 Skyhawk, A-6 Intruder, A-7 Corsair, EA-6B Prowler, E-2 Hawkeye, F-4 Phantom, F-14 Tomcat, F/A-18 Hornet, S-3B Viking, UH-2, SH-60/HH-60 Seahawk helicopters, and C-2 Greyhound.

KITTY HAWK was the US Navy's last conventionally powered super carrier and a decommissioning ceremony took place at Puget Sound Naval Shipyard in Bremerton, Washington on May 12th 2009. The ship is currently inactive.

USS Theodore Roosevelt (CVN-71) is the fourth ship in the Nimitz-class of nuclear powered aircraft carriers. She was laid down on Oct. 31 1981 at Newport News shipyard, launched on 27 October 1984 and commissioned on Oct. 26 1986. The flight deck measures 333m x 76.8m and is equipped with four lifts, four steam-driven catapults and four arrester wires. The carrier is capable of launching one aircraft every 20 seconds. The nuclear-powered carrier has two General Electric pressurized water reactors driving four turbines of 260,000hp and four shafts. There are four emergency diesels of 10,720hp. The carrier already participated in several wars and operations: The Gulf War in 1991, Operation Allied Force in 1999, Operation Enduring Freedom in 2001/2002 and Operation Iraqi Freedom in 2003.

After many years of development and the recent release of many top quality kits. Trumpeter is now an internationally recognized injection molded plastic model kit manufacturer. We have progressed rapidly in the tooling and production of unique subjects in excellent detail and quality and wish to thank everyone for their enthusiastic support and response.

Our goal is to continue to produce top-quality model kits with world-wide appeal. Subjects will include prototypes form Asia, Europe, the USA and more in order to satisfy the demands of modelers across the globe. We welcome your comments on our kits as we are always interested in finding out whether we can improve on our products or whether there are suggestions for subjects which we could consider tooling. In the following pages you will see kits currently in production as well as many kits in development for release in 2016&2017. These upcoming releases are all newly tooled and completely designed and developed by ourselves using photos, books, blueprints and other reference materials. Trumpeter uses the most up to date technological equipment which enable us to produce kits of incredible detail using the most modern computerized methods .This ensures that all kits include the maximum number of details as including recessed panel lines, rivet details, ship deck lines, etc. Trumpeter model kits will revolutionize the model industry with their top quality kits.

We invite you to have a look at this 2016-2017 Trumpeter catalogue to see the unique kits that you can expect to see produced in the next 2 years. There is bright future in modeling from Trumpeter to you!
