Custom Micron

Absolute Precision for the Elite Professional

For the elite professional who demands precise and accurate control of very detailed spraying, the Custom Micron Series is built to be the "best of the best," hand-tested and adjusted by the world's leading airbrush technicians.

13407730

CM-C Plus

- 0.23 mm nozzle
- A breakthrough technology, the Micro Air Control (MAC) Valve enables infinite control of the airflow at the head of the airbrush, which provides even more control of stippling, fine details and finely atomized background spraying
- The new solvent-proof Teflon™ needle packing allows for the use of automotive or other solvent-based paints
- The funnel shape of the redesigned gravity-feed cup lets the airbrush be used with only a couple of drops of paint, ensuring a fast and thorough clean up
- A cutaway handle enables users to grab the needle-chucking nut and quickly pull back the needle to flush paint out of the cup and paint passageways for a quick and easy clean up

13407520

CM-C

- 0.23 mm nozzle
- Ideal for professional use where heavier paints are required or when larger work is being created
- The Iwata Custom Micron matched-head system ensures superior atomization
- Features a larger 1/3 oz. (9 ml) gravity-feed color cup for working with large volumes of paint

Custom Micron Head System Superb Performance

The unique feature of the hand-matched head system means all of the parts in the head are assembled, tested and adjusted until the spray characteristics are as perfect as an airbrush can be. Available only as a set, the head systems can be interchanged for maximum reliability and ultimate performance. Spare head systems can be purchased to ensure the Custom Micron will always spray to its fullest potential.

The unique test spray pattern is included with all Custom Micron Series and High Performance Series Airbrushes.

13407500

CM-B

- 0.18 mm nozzle
- The smallest nozzle and needle combination for the most precise and accurate control of detail spraying
- Features a 1/16 oz. (1.8 ml) gravity-feed cup that cleans quickly for rapid color changes
- A highly polished, hardened stainless-steel needle provides an exceptionally smooth transition from detail to mid-range spraying

13407510

CM-SB

- 0.18 mm nozzle
- The same features of the Custom Micron B except it has a 1/8 oz. (3.5 ml) side-feed cup, which is engineered for right- and left-handed use
- Because it is side-fed, a view directly over the top of the airbrush allows for up-dose, fine detail work
- For larger artwork, the Custom Micron versatility is enhanced by an optional 1/4 oz. (7 ml) side-feed cup, 1/2 oz. (14 ml) gravity-feed cup or a 1 oz. (28 ml) siphon bottle

Featuring the ultimate in air control directly at the nozzle with Iwata's new Micro Air Control (MAC) Valve Technology, the Hi-Line Series is designed for artists who need extreme control of detailed spraying.

The Hi-Line Series is now made with Teflon needle packing, a dual-purpose cutaway, pre-set handle and one-piece auxiliary lever/needle chucking guide.

HP-AH

- The gravity-feed cup features a smooth inside taper that provides for a quick and easy clean up

Micro Air Control (MAC) Valve

A breakthrough technology, the Micro Air Control (MAC) Valve enables infinite control of the airflow at the head of the airbrush, which is different than just regulating the air pressure at the compressor.

- Lets users spray a coarse stippling effect to full atomization with a quick turn
- For fine line or detailed work, it can be adjusted to create the optimum airflow for maximum control of the paint output
- By fully opening the MAC Valve, the airbrush can quickly be cleaned during color changes or for wide background spraying

NANO SERIES™

When we started to make the original stencils in the Artool® lineup smaller for, well... smaller jobs, the prospect came up that we should design a specific series for the smallest projects out there, namely the RC car market, 1/8 - 1/25 scale models and diecast kustoms. At the size of a business card, the Artool® Freehand® Airbrush Templates can be used to easily render images on the smallest projects, including the complete side graphics on your car - as long as your car is only 2 or 3 inches long!

Double-Colored and Translucent CUTTING MATS

Double-Colored and Translucent Cutting Mats

The Artool™ Cutting Mats are the most flexible cutting mats on the market today because they're made of a new, 3-ply high-tech polymer material. Constructed with a self-healing surface, Artool™ Cutting Mats are extremely durable and hold up under repeated use with art and mat knives or rotary cutters. If an Artool™ Cutting Mat should become bent or distorted, simply heat it in sunlight or hot water until it becomes pliable and then lay the mat flat.

colours

for Airbrush & Paintbrush

Not all airbrush colours are the same. Com-Art is considered to be one of the finest and most versatile professional airbrush colours in the world. Because of a common hydro-carbon base binder, Com-Art transparent and opaque colours can be used together without bleeding between colours. This non-toxic, ready to use paint is specifically formulated for use with an airbrush and never needs to be filtered or strained. Com-Art colours are heavily pigmented and light fast, allowing for accurate 4 colour separations. They provide superior atomization, smooth spraying, and they dry instantly.

Medea Textile Colours by Jürek feature a new, more versatile formulation. This allows for spraying on a variety of surfaces, including leather, wood, canvas, textiles, silk and found objects. Now the improved formulation even sprays great on hard surfaces such as license plate tags, metals, plastics and more! Use Medea topcoat (waterbased polyurethane) for a final durable finish.

Their free-flowing brilliance and their non-clogging nature are due to the finest ground pigments and a special additive called the "Lube." The "Lube" provides an exclusive wetting agent and a flow enhancer that allow four hours of hassle-free spraying. Additionally, the flow enhancer breaks down the surface tension of the paint, resulting in better fabric absorption (when applied to textiles) for greater washability and wear.
